

Material Outgassing

Print media

The Ni-IMS-Portable by G.A.S. is a powerful analytical tool to detect the outgassing of different print media. Solvents and chemicals used in the paper manufacturing as well as in the printing process are displeasing for readers and may have negative effects on their health.

Therefore the Ni-IMS is a fast, budget-priced, sensitive and mobile technique to ensure good product quality and minimize negative effects on consumers.

Outgassing of different catalogues
